

Giving a new dimension to Cultural and Natural Heritage through the New Technologies

> THE COMPANY

Since its beginning in 1996, **Sistemas do Futuro** has contributed in a decisive and enterprising for the use of new information technologies in the management of cultural and natural heritage through the development and commercialization of innovative products. For the company's success has greatly contributed the partnerships and agreements with universities, research centers and cultural institutions.

> THE TEAM

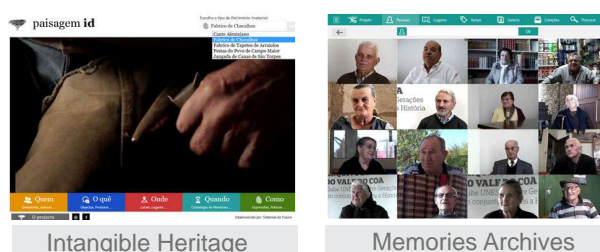

Sistemas do Futuro has a multidisciplinary team that develops and implements cultural products, using new technologies of information and communication, supplemented by consulting services, technical support and specialized training. The team has university degrees and experience proven in diverse areas, such as: **History, Art History, Museology, Archeology, Information and Communication Systems, Design and Multimedia.**

> CULTURAL HERITAGE MANAGEMENT SYSTEMS

inpatrimonium.net

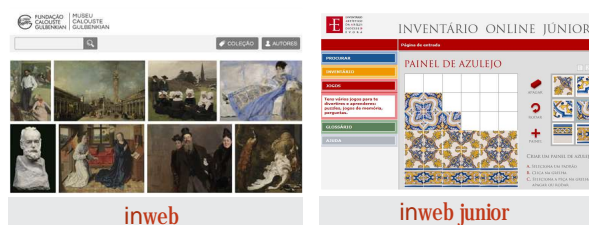

inpatrimonium.net was developed with the most recent Web technologies. What distinguishes this new product is that the application is installed on a Web server which users can access through a browser such as Internet Explorer, Mozilla FireFox or Google Chrome, regardless of the operating system used in the institution instead of the typical Client/Server architecture.

inweb Cultural Heritage Online access

inweb operates as an interface between the internet user and the different internal management systems such as **inarte, indomus, innatura, indoc, inmemoria** or **inpatrimonium**. This system allows for information to be looked up dynamically with any of the afore-mentioned databases. **inweb** was developed to operate in stand-alone mode or to be personalized and integrated into the Organisation's web page, taking into account the design of that page and the type of information available to the public.

> INTERNET - ONLINE CONTENT MANAGEMENT SYSTEM

www.museusportugal.org

www.museudafarmacia.pt

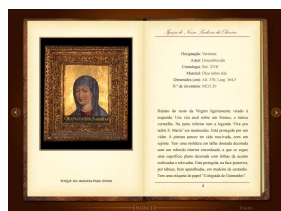

www.escritoresanorte.pt

www.joanavasconcelos.com

insite is a content management system that allows the Institution to manage website content dynamically over the internet. Provides management and maintenance of websites and newsletters through a set of editing features of all sorts of multimedia content, giving institutions full autonomy to manage their pages, thus facilitating their Internet presence.

> MULTIMEDIA APPLICATIONS

FIAMP 2012 - Bronze Web'Art Special Prize

www.ludisaeculares.com

Alongside to the development of specific products, **Sistemas do Futuro** is also involved in projects based in multimedia technologies. Always in the Cultural and Natural Heritage sector, **Sistemas do Futuro** can add value to our customer's projects through the development and implementation of multimedia applications.

Multimedia in education transforms the educational experience in a particularly interesting challenge. In this era of multidisciplinary knowledge, where technological factors have established themselves as facilitators of communication, is imperative that museums can have efficiently at their disposal this type of technology to fulfill the mission of disseminating and promoting cultural heritage.

Through its media Lab, **Sistemas do Futuro** has over the years developed an intense activity in this area and had created reference and quality products, allowing museums to fulfill their goals.
