

Artistic Heritage Management

in arte online is the new mobile cultural heritage management system from Sistemas do Futuro. It was created with the latest technologies, following the international standards for documentation and collection management to adequately meet the needs of institutions that wish to efficiently manage their collections through an Internet network. **in arte online** is the result of more than 25 years of experience of a qualified team and appears as another version of **in arte** in use by hundreds of cultural institutions in several countries.

in arte online is the new mobile cultural heritage management system from Sistemas do Futuro. It is installed in a server with IIS and can work in local or public networks (through the Internet using a browser).

This application is developed taking into account the international standards defined by institutions such as CIDOC (ICOM's International Committee for Documentation), the Collections Trust, the Getty Research Institute or the Canadian Heritage Information Network.

MODULES

Catalogue: Registration and management of generic and specific heritage information to which all kinds of documents or digital files can be added (images, documents, videos, etc.).

References: Record of documentary reference data that support cataloging and collection management: bibliography (monographs, periodicals or electronic), still images, moving images, graphics, archival material, cartography, among others.

Multimedia: It allows the management of all types of digital files associated with the records, access to derived images and their properties in terms of metadata.

Entidades: Registration and management of data on any type of entity (authors, photographers, stakeholders, insurers, etc.) required for heritage documentation.

Terminology: Allows the management and parameterization of different tables/terms to help with data entry in the remaining application modules.

Reports: Module that provides different reports based on the information in the database. All available reports are produced by Sistemas do Futuro according to the users' requests.

Assisted Searches: It allows the insertion, modification, deletion and visualization of searches created and parameterized by the application's users.

Search: In the general search you can search the entire information system using a word or expression.

Events: Register of the data that allow the management of the collection: exhibitions, catalog production, conservation, loans, requests, culling, movements, insurance, research projects, reproductions or other type of relevant event.

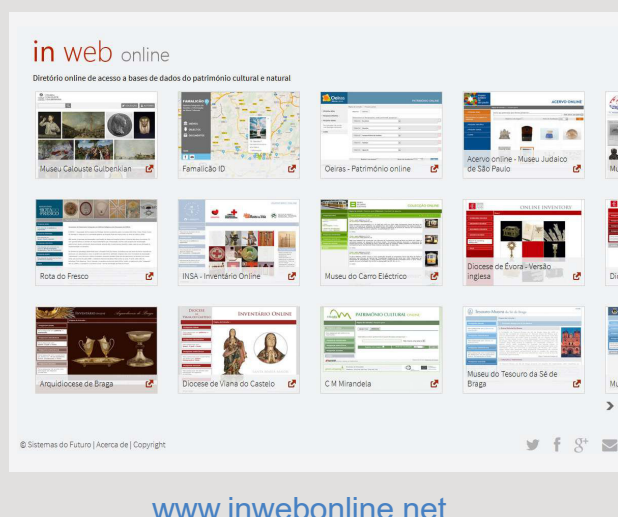

Settings: Allows you to view the characteristics associated with the profile, change the access password or other data related to the user. You can also quickly select the files with visibility for the web.

ONLINE ACCESS

It is also possible to publish your collection online by creating a publicly accessible digital catalog. The online disclosure of your collection's data is optional and allows the configuration of the type of fields and the information that is made available to the public.

The online catalog uses a tool specifically developed for the provision of online cultural content, the in web - online access to heritage, which already has several versions and is used by various cultural institutions, such as museums, foundations, dioceses, etc.

CLOUD HOSTING SERVICES

Sistemas do Futuro provides its customers with cloud servers to host **in arte online**. Through an annual maintenance and technical assistance contract that includes software support, free updates, daily backups, data security and confidentiality.

The contract is adjusted with the different disk space options that the customer wants and can, at any time, adjust the space to his needs according to the options table.

CLOUD HOSTING		
	DISK SPACE	Nº IMAGES
Option A	1 GB	3.000
Option B	5 GB	15.000
Option C	10 GB	30.000
Option D	20 GB	60.000

*The number of images may vary depending on the resolution.

TECHNICAL REQUIREMENTS

in arte online needs specific computer requirements (see table) if the installation is done in the Customer's server and without using the hosting services provided by Sistemas do Futuro, Lda.

TECHNICAL REQUIREMENTS		
	SERVER	CLIENT
Operating system	Win. Server 2019	Microsoft Edge v. 87.0.664.75
Database	SQL Server 2019	Mozilla Firefox v.58.0.1
RAM	>= 16 GB	Google Chrome v. 63.0.3239.132
Disk Space	>= 100 GB	Safari . Apple V. 14.0.2
CPU	Intel Core i7 (Quad core)	
Web Service	IIS e .NET 4.5
